SYSTEM AND METHOD FOR DISPLAYING DOCUMENT METADATA

Abstract of the Disclosure

5   A method for displaying metadata placed on a document, includes accepting a command to load a document file that corresponds to the document into a memory of a computing device. The method also includes a computer-aided design application accepting, by way of a command line interface, a command to assign a label to each of a plurality of metadata elements in the

10   document file. The method further includes displaying at least one of the plurality of metadata elements in response to a command to display the label assigned to the at least one of the plurality of metadata elements, thereby allowing a user to verify a value of the at least one of the plurality of metadata elements.
